

Mount Carmel RC Primary School

Truth, love and living life to the full

Our vision and principles for science

Our vision:

We aim to ensure that all children develop a sense of excitement about the disciplines of biology, chemistry and physics. By equipping our children with the necessary science skills to help them understand the world around them, they will recognise the importance of science in the welfare of our future.

Our principles:

Science in our school is good when:

- We are excited and challenged by our learning
- We investigate, experiment and evaluate our ideas
- We ask scientific questions
- We are involved in practical 'hands on' investigations
- We understand and use scientific vocabulary
- We are developing and extending our learning by exploring and discovering new things
- We make links to other subject areas, the world around us and our wider school life
- We ask if we don't understand and we learn it again
